

CS-FB HIPRO FLAP WHEEL

The CS-FB HIPRO are open-structure flap wheels produced by using flaps of a special very strong non-woven nylon fibre fabric of COARSE grit radially glued around a central fibre core.

APPLICATIONS

WOOD

Despite the hardness of the material of which they are produced, these flap wheels can be easily shaped to work on any type of profile.

Thanks to their characteristics, they are used for scratching hot-stamped foils or silver and gold leaves applied by hand.

SILICONE WHEELS FOR HOT STAMPING MACHINES

The silicone wheels for hot stamping machines are produced by using special high-temperature resistant silicones.

They are produced in different shores and dimensions according to the required application or machine on which they are used.

They are used for transferring hot foils on wooden and plastic picture frame mouldings or profiles.
