Dear
CUSTOMERS

Their Locations

**Object Ref.: Notice to the customer
Request to Customer for Communications about "REACH" Regulation**

Dear Customer,

As you will certainly know, the **Reach Regulation** on Assessment of chemical substances and the resulting Authorization of using and trading, came into force on 01 June 2008.

For those who have pre-registered their substances, **EchA** (European Chemicals Agency) has provided a transitional period, during which will be collected all the information, in terms of volume and hazardous characteristics of substances.

DISCOTELSISAL as a user of supply chain, **or downstream user NOT required to pre-registration**, has been active for some time to get from their suppliers data and information in accordance with the Regulation "Reach".

They have confirmed that they have pre-registered within the time, to collect any information necessary to achieve compliance and making serious efforts to avoid interruptions in the supply chain due to the lack of notification.

DISCOTELSISAL confirms its commitment to put at your disposal, as well as its suppliers, data and news as soon as they will be made available.

Likewise our Customer, on the substance of the compliance obligation and with particular reference to the scenarios of use, as a downstream user, is committed to provide us with any information or observations about the acute effects on human health and in working places, with the results of tests performed, in order to be able to communicate them to the registration holders.

We ask, therefore, to create a fast lane in keeping us up to date of any developments on this and tell us as soon as possible, the data and information required, and all those useful to ensure the best information on mutual security:

- **We ask you for your availability to give us the news about the exposure scenarios and use of substances or the chemical preparations of interest, informing us in case of any changes or observations originated such as to provide acute effects on human health and the result of tests carried out by the downstream user .**

These requirements apply to substances on their own, as components of chemical preparations and intended to be released from articles under normal or reasonably foreseeable terms of use.

We count on your cooperation to welcome the best health protection in the workplace and, waiting for any your communications,

Our kindest Regards.

Discotelsisal S.r.l.
